

Recent Research Publications from CAR:

Identifying Real World Barriers to Implementing Lightweighting Technologies and Challenges in Estimating the Increase in Costs

As the midterm review approaches, conversations have turned to the subject of fuel economy and meeting the 2025 CAFE standards. In this report, a first in an ongoing analysis by CAR, we identify and bring perspective to real-world barriers faced by automakers to implementing technologies that can contribute to reducing emissions and improving fuel economy.

Global Harmonization of Connected Vehicle Communication Standards

This report examines international efforts to develop “harmonized” connected vehicle standards that would enable automakers, governments, and technology developers to, at a minimum, adopt analogous conceptual and technological frameworks across markets.

About CAR

The Center for Automotive Research’s mission is to educate, inform and advise stakeholders, policy makers, and the general public on critical issues facing the automotive industry, and the industry’s impact on the U.S. economy and society. CAR produces industry-driven research and analyses; develops forecasts; fosters dialogue and convenes forums; and publicly disseminates its research through conferences, events, and the media.
